Climatic drivers of dipterocarp mass-flowering in South ...

The Dipterocarpaceae are a family of 16 genera and about 695 known species of mainly tropical lowland rainforest trees.The family name, from the type genus Dipterocarpus, is derived from Greek (di = two, pteron = wing and karpos = fruit) and refers to the two-winged fruit. The largest genera are Shorea (196 species), Hopea (104 species), Dipterocarpus (70 species), and Vatica (65 species).

Dipterocarpaceae - Wikipedia

The different groups of Dipterocarps featured here are Dipterocarpus, Shorea, Hopea (these being the 3 main groups), and Anisoptera, Dryobalanops, Neobalanocarpus, Parashorea, Vatica. Developed in 1991, the 14-hectare Yishun Park was selected as the home for the Arboretum as its range of topography and soil conditions are suitable for the growing of various species of Dipterocarps .

Ecological considerations for using dipterocarps for ...

Almost all dipterocarp forests are restricted to the tropical lowland, and the maximum elevation where dipterocarps can live is 1300 m asl (Smitinand and Santisuk, 1981). Nowadays the northernmost dipterocarp forest lives in Medog area (29°19'N), a wet, hot river valley in southeastern Tibet and topographically open partly to monsoon moisture (Chen et al., 1997).

A Review Of Dipterocarps

This book synthesises our current knowledge concerning dipterocarps, exploring the family through taxonomic, evolutionary, and biogeographic perspectives. Dipterocarp Biology, Ecology, and Conservation describes the rich variety of dipterocarp forest formations in both the ever-wet and seasonal tropics, including the less well known African and South American species.

Download Dipterocarp Biology Ecology And Conservation ...

Dipterocarps that occur in lowland forests have experienced greater habitat loss than upland/lower montane or ultramafic species. In addition, species with the lowest predicted area within their historic distributions had the highest proportion of habitat lost, which provides a rationale for targeting conservation effort on the species with narrow distributions.

A Revised Conservation Assessment of Dipterocarps in Sabah ...

Dipterocarpaceae, family of largely South Asian and African timber trees, in the hibiscus, or mallow, order (Malvales), comprising 17 genera and 680 species. Few species grow east of Wallace's Line, the boundary between the Oriental and Australian faunal regions proposed by the 19th-century British
