Embed A Data Connected Visio

To connect a Visio document to a data source, you add a DataRecordset object to the DataRecordsets collection of the document. A DataRecordset object in turn has a DataColumn collection of DataColumn objects, each of which is mapped to a corresponding column (field) in the data source. Data sources you can connect to include Excel spreadsheets, Access and SQL Server databases, SharePoint lists, and other OLEDB or ODBC data sources, such as an Oracle database.

About connecting to data in Visio | Microsoft Docs

step process - import your data first, then connect it to shapes. In this exercise, you will first use the Data Selector wizard to import a SharePoint 2013 list into the External Data window in the Visio diagram. The data in the External Data window is a snapshot of your source data at the time of import.

Where To Download Embed A Data Connected Visio Diagram In Sharepoint 2013

refresh does not pull data from the original data sources. It simply updates the resources in Power BI with the metadata and data from the .pbix, .xlsx, or .csv file.

Visio and PowerBI - Microsoft Power BI Community

With Visio 2013, I can connect to the data source, but once I try to connect to any table I run into this error: The selected table has only one field or contains no definition information. The Database Wizard requires a minimum of one key field and one additional data field. These errors occur no matter how I approach or navigate any wizard.

Two way Visio-Database linking problem

Embedding Project data into another program creates a copy of your project in the destination file. Embedding data creates a self-contained file—for example, for the subcontractors who can't access your computer systems. If you send them status reports with linked objects, they would see broken links, not data.

Microsoft Project 2010 : Linking and Embedding Project Data

I have been updating data sources from Visio for years, using custom code or with the old Database Wizard. In fact, I was a beta tester for the Database Wizard back in 1996/7, and used it successfully for many years, but it has limitations, not least because it uses ODBC and there can only be one data source per document. More recently, I have relied on custom code, usually in the form of a C# ...
