Macroeconomic Theory | Harvard University

A macroeconomic model is an analytical tool designed to describe the operation of the problems of economy of a country or a region. These models are usually designed to examine the comparative statics and dynamics of aggregate quantities such as the total amount of goods and services produced, total income earned, the level of employment of productive resources, and the level of prices.

Macroeconomic model - Wikipedia

Macroeconomics is a branch of economics dealing with the performance, structure, behavior, and decision-making of an economy as a whole. This includes regional, national, and global economies. Macroeconomists study topics such as GDP, unemployment rates, national income, price indices, output, consumption, unemployment, inflation, saving, investment, energy, international trade, and international finance.

Excerpt from Economic Theory and Ocean: Transportation of Oil
The subject of this presentation is economic theory and oil transportation by ocean going vessels. I must at the outset admit that it is very pretentious for anyone to even attempt a topic such as this, let alone to be all encompassing, given the breadth and depth of economic theory.
